DBMSs gain warehouse features for decision support: support for time-series data types vital. (Brief Article)

Knowles, Anne

PC Week, v11, n45, p96(1)

Nov 14, 1994

DOCUMENT TYPE: Brief Article ISSN: 0740-1604 LANGUAGE: ENGLISH

RECORD TYPE: FULLTEXT

WORD COUNT: 345 LINE COUNT: 00027

... relational data stores to support the multidimensional data used in data warehouses is centered on **time** -series data. RDBMSs will have to start supporting **time** -series data types that allow SQL queries that use **time** as a third dimension.

RDBMSs now allow queries based on only two dimensions -- rows and columns.

"We do **time - analysis trends** , comparing **year** to **year** , to make decisions about managing the health-care business," said Brian Harney, technical-support specialist...

...is presented in a simpler format, in a package, so to speak," said Harney.

Several **database** makers are **adding** support for UDTs (user-defined data types), a first step toward **time** -series data. UDTs let users extend **SQL** themselves so the **DBMS** can handle **time** -series data, among other non-traditional data types.

Oracle added UDTs to Oracle7. IBM announced...
